The project consisted of the construction of a new 43,000 square foot multipurpose recreational facility including 3 basketball courts, a running track, a weights and fitness area as well as an aerobics area.

The mechanical scope of work included heating ventilating and air conditioning with exposed double wall ductwork integrated with architectural elements. The plumbing scope of work included fixtures, piping systems and accessories. In addition, the project included a complete fire sprinkler system.

The electrical scope of work included lighting, power and addressable fire alarm systems. Telecommunications work included structured cabling plant as well as audio / visual systems.
